CAPITALWAVE / CAPITALFIA

Fixed Income Analyzer

One-session pilot plan

Audience and objective

For finance instructors and training leads teaching bond valuation and duration. By the end of the session, learners should be able to answer: Which bond loses more when yields rise?

Before class

Open the product page and try the instructor demo if offered. Run the exercise, confirm learner access, and decide how you will collect work. Request a walkthrough from the product page if needed.

60-minute session

10 minutes to introduce the decision and record predictions. 35 minutes to work through the analysis. 15 minutes to review results and debrief.

Classroom exercise

Reprice the example bond at 5% and 6%. Repeat with a second bond in the analyzer, holding each bond's terms fixed across the shock.

Evidence and review

A before-and-after price table with a duration-based explanation. Check whether learners compare percentage moves and identify why duration is an approximation.

Scope and decision

Confirm access dates, seats, support, and any fees with CapitalWave. Agree what counts as a successful pilot. Review learner work before expanding to additional cohorts.
